This brief instruction guide contains important information. Please read carefully and store in a safe place.

This instruction guide contains important safety, performance and service information. Read it before you take the first ride on your new tires, and keep it for reference.

Additional safety, performance and service information for specific components such as handlebars or seatpost on your bicycle, or for accessories such as helmets or lights that you purchase, may also be available. Make sure that your Authorized Specialized Dealer has given you all the manufacturers’ literature that was included with your bicycle or accessories. In case of a conflict between the instructions in this instruction guide and information provided by a component manufacturer, always follow the component manufacturer’s instructions.

If you have any questions or do not understand something, take responsibility for your safety and consult with your Authorized Specialized Dealer or the bicycle’s manufacturer.

This manual is not intended as a comprehensive use, service, repair or maintenance manual. Please see your Authorized Specialized Dealer for all service, repairs or maintenance. Your Authorized Specialized Dealer may also be able to refer you to classes, clinics or books on bicycle use, service, repair, and maintenance.

Many of the Warnings and Cautions say “you may lose control and fall.” Because any fall can result in serious injury or death, we do not always repeat these warnings. Because it is impossible to anticipate every situation or condition that can occur while riding, this instruction guide makes no representation about the safe use of the bicycle under all conditions. There are risks associated with the use of any bicycle that cannot be predicted or avoided, and which are the sole responsibility of the rider. This instruction guide should be used in conjunction with the Specialized Bicycle Owner’s Manual. If you have purchased this product in the aftermarket or separate from the bicycle, go to [www.specialized.com](http://www.specialized.com) and download and read the Bicycle Owner’s Manual.

**TREADWEAR INDICATORS**

What are these things on my tires?

Some models of Specialized road tires are equipped with Tread Wear Indicators (TWI). These small divots will wear as the tire tread wears. As the indicators become less noticeable, consider replacing the tire. Do not wait until the indicators are completely gone before replacing the tire.

There are two divots located on the tire. They are approximately 110mm apart and are indicated by an arrow and “T.W.I.” on the tire sidewall.

Some tires ship in retail packaging that have the following graphic, which denotes tires with tread wear indicators. Not all tires with tread wear indicators will ship in packaging that has this graphic, however.
